

ADMM Denoising Results

I ran ADMM on the noisy image `ima-noisy.pgm` for

$$t_i \in \{5, 10, 15, 20, 25, 30, 35, 40\},$$

stopping each run when $\|y^{k+1} - y^k\|_2 \leq 10^{-2}$. Table 1 summarizes the outeriteration counts k_i^* and the solution norms $\|y_i^*\|_2$.

t_i	k_i^*	$\ y_i^*\ _2$
5	207	141.90
10	169	142.72
15	144	143.05
20	128	143.23
25	117	143.35
30	109	143.44
35	104	143.51
40	100	143.56

Table 1: ADMM iteration counts and solution norms for each regularization parameter t_i .
